

Integration & Partnerships

Working **with** others, working **for** you

Current Partnerships

Automated Pump: One of the most important pieces of an EMR system is for it to work with your dispensing pump. If you're using a Scilog or Ivek pump, we are already fully integrated. If you're using a different type of pump for automated dispensing, we can easily integrate with them as well!

Central Registry: Are you using Lighthouse or other common central registry system? If so, MethodOne is likely already fully integrated and compliant with its requirements. If you're using a central registry system, let us know!

Billing Agencies: We understand that billing agencies have lots of different requirements. Our billing module is already compliant with primary major billing requirements to make it easy to export and import the data you need.

Labs: We work with dozens of laboratories across the country to isolate their specific panel and requirements to make bulk import of drug screen and lab results easy and automated!

Prescriptions: Our partnership with DrFirst allows users to ePrescribe, track existing and previous medications, and run PDMP checks.

We are always developing new partnerships and working on integrating with our customer's other service providers. This includes e-prescribing capabilities, new labs, state-mandated billing systems, etc.

If you're unsure if we currently do or could integrate with one of your other service providers, contact us!
